

### OPERATING INSTRUCTIONS

**THE PUMP:** This pump is a totally enclosed, submersible dewatering unit. It is powered by a 1/3 HP, 12 volt DC 30 AMP motor. Battery clips on the power cord allow easy connection to any 12 volt vehicle battery.

**SWITCHING:** The on-off switch is located on the power cord.

**CONNECTING TO BATTERY:** When connecting the clips to a battery, arcing is eliminated by keeping the on-off switch in the "off" position. Connect the red battery clamp to the positive (+) battery terminal. Connect the black battery clamp to ground: preferably on the vehicle's engine to a solid, metallic, stationary point. The connection should be at least 18 inches (480mm) from the battery.

### IMPORTANT SAFETY INFORMATION

**HOSE:** Since the pump develops relatively low pressure, it is recommended that non-collapsible hose be used for maximum pumping rates.

**HOISTING & LOWERING:** An eye at the top of the unit is provided for attaching a line for hoisting or lowering. **Do not use power cable for handling unit.**

**TO OPERATE:** Lower unit into liquid to be pumped and activate switch. Pump can be run for a few minutes without liquid, however, **do not run completely dry for extended periods.** Damage to shaft seal may result.

**RUNNING TIME:** This unit draws about 30 amperes and can be operated about 1 hour on a fully charged 55 AMP-hour battery and still permit starting of vehicle under normal conditions. Caution should be used when running time exceeds 30 or 40 minutes without engine running to recharge battery, particularly in cold weather when battery efficiency is lowered. Battery size (AMP-hour rating) and the use of other accessories such as lights and radios, etc., must be taken into consideration for practical running periods without engine running.

**OVERLOAD PROTECTION** is provided by means of a 40 amp automatic reset circuit breaker, located under top cover.

1. Make sure the vehicle and the pump are not in contact during connection.
2. Do not use power cable for handling unit.
3. Do not run completely dry for extended periods. Damage to shaft seal may result.

## TROUBLE SHOOTING

**NOTE:** Most common cause of failure to run is due to hardened mud and sand at impeller. Remove strainer to check.

### MOTOR WILL NOT RUN:

1. Poor connection at battery.
2. Impeller locked with foreign material.
3. Insufficient impeller clearance.
4. Damaged power cable or loose connection internally in motor assembly.
5. Bad switch or circuit breaker. Connect power leads direct to motor leads to check.
6. Worn motor brushes or out of position to make contact with armature.

### PERFORMANCE LOW:

1. Strainer screen partially plugged.
2. Impeller rubbing. Check freeness of rotation with screwdriver inserted through hole in base plated into slotted end of shaft.
3. Battery not fully charged.
4. Discharge restriction such as kinked hose or excessive discharge head.

### Motor runs backwards:

1. Check wiring for correct polarity.

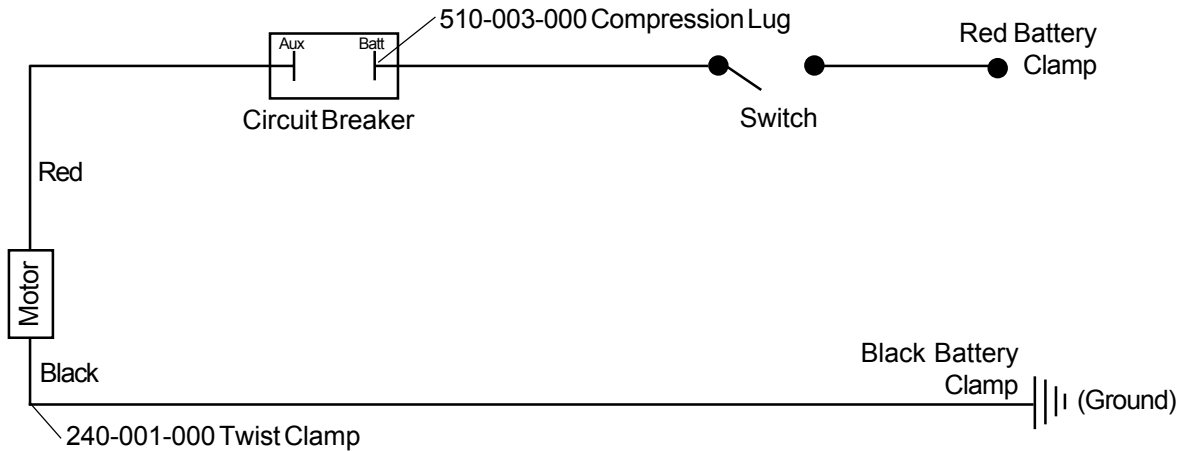

## SERVICE AND REPAIR INSTRUCTION

**DISASSEMBLY:** Impeller and shaft seal can be inspected and serviced from lower end of pump by removal of 4 capscrews securing base plate, strainer screen, and suction cover. Screwdriver slot is provided in end of motor shaft to turn shaft while holding impeller for removal. This permits removal of impeller without disassembly of upper motor housing to hold motor shaft.

To service motor remove 4 hex nuts and bump top cover free from housing tube. Raise sufficiently to disconnect power cable connections. Slide housing tube up from pump casing and motor will be exposed for service or removal.

**IMPORTANT:** Make certain that wire leads are installed per diagram below. Install top cover as indicated by arrow and instruction on top of cover.

## WARRANTY

This unit is guaranteed for a period of 5 years against defective material and workmanship.

Repair Parts shown in **bold face (darker)** type are more likely to need replacement after extended periods of normal use. They are readily available from most Warren Rupp distributors. The pump owner may prefer to maintain a limited inventory of these parts in his own stock to reduce repair downtime to a minimum.

**IMPORTANT:** When ordering repair parts always furnish pump model number, serial number and type number.
